

## **Quick Tips for Thanksgiving Food Safety**

Article written by Cindy Brison, MS, RDN (<u>cbrison1@unl.edu</u>) Extension Educator in Douglas-Sarpy County

Thanksgiving is a time for families to gather and enjoy each other - not suffer from food poisoning! Here are a few quick tips to keep your family healthy:

- The United States Department of Agriculture (USDA) recommends thawing the turkey in the refrigerator. It takes 24 hours for every 4-5 pounds of turkey, not including the day you cook it. A 20-24 pound turkey would take about 5-6 days to thaw.
- For optimum food safety, do not stuff your turkey. Place stuffing in a separate baking dish or pan to cook.
- USDA recommends an oven temperature no lower than 325°F for cooking a turkey along with using a food thermometer to make sure the thickest part of the turkey reads 165°F. A 20-24 pound turkey may take about 5 hours to cook.
- Avoid cross-contamination by using separate cutting boards, plates, and utensils when handling raw turkey.
  Wash items that have touched raw meat with warm soap and water, or place them in a dishwasher.
- Refrigerate leftovers within two hours to prevent bacteria from growing on the food. Eat leftovers in the refrigerator within 3-4 days. Use the freezer to store leftovers for longer periods.
- Do not overfill your refrigerator, as it causes it to work too hard and may not keep foods at 40°F or below.

- Simplify the day by preparing foods the day before.
- Do not prepare food when you are ill.
